RED-V
Super Digital Signage

R E L E A S E   N O T E S

Release notes

This document contains the release notes for RED-V Server ver. 17.04.B.002.

The biggest changes and features for this release with respect to the previous one, is the support for new displays for Embedded Signage from Toshiba and Philips.

Android-based Media Players
The current versions for the Android media player apps are:
- Starter: 1.17.0
- Player: 6.4.0
- Launcher: 6.0.0
- Downloader: 6.3.1
- WebPlayer: 5.2.0

NEWLY SUPPORTED DEVICES

From version 17.04 RED-V adds support for the following devices:
- Toshiba Embedded Signage professional displays: Embedded signage models can be identified by the ending 'E' found after the model number (e.g. TD-E433E)
- Philips Android professional displays

Toshiba ES Display
The current versions for the Toshiba ES displays apps are:
- Player: 1.1.1
- Launcher: 1.0.0
- Downloader: 1.1.1

NEW FEATURES AND FUNCTIONALITIES

Weather Forecast

The Weather widget now supports display of forecasts for the following days.

Restart (reboot) command

Added command for all media players to schedule a restart of the media player.

Removed black screen on video loading

On RXV A804K and RXV A740R media players the back screen shown during video loading has been replaced with the last frame of the same video being loaded.

Reverse Landscape Orientation

Added reverse landscape orientation to Android-based media players.
This feature can be useful in video wall installations if some display has to be installed in reverse landscape because of a mechanical constraint (e.g. a bulging IR receiver).

Date and Time with different colors and size

The Clock widget now supports different font size and colors for time and dates.
