

RED-V
Super Digital Signage

R E L E A S E N O T E S

Release notes

This document contains the release notes for RED-V Server ver. 19.10.A.001.

NEW FEATURES AND FUNCTIONALITIES

Scheduling of Sequence of Programs

It's now possible to schedule in a single time slot of the calendar of a channel, not just a single program, but a sequence of programs. To create a sequence of programs the user just needs to create a new channel with Sequence scheduling.

RSS Speed Settings

Added speed control for RSS news tickers. The user can now choose 5 different speeds for the text animation.

Facebook Pages Support

It's now possible to show Facebook posts from a Facebook page. The user needs to be the page owner in order to grant access to the posts of the Facebook page itself.

Posts from normal Facebook users are not accessible and cannot be displayed on the screen.

RED-V ONE New Features

Added support for audio streaming.

Removed restrictions on bitrate during video upload: on previous versions it was not possible to upload videos on RED-V ONE (that is directly to the media player) with bitrate higher than 20 Mbps.

Other Improvements

- Improved Twitter layout.
- Improved support for YouTube videos on Android media players.
- Better SNMP support.
